Education

Kalinga Institute of Industrial Technology (KIIT – DU)

Bachelor of Technology in Computer Science Engineering GPA: 7.22

Expected May 2026

Experience

Software Engineer Intern, Logicleap AI Pvt. Ltd. – Bangalore

July 2025 – Jan 2026

- Designed and developed interactive frontend dashboards for client demonstrations, improving product visualization and stakeholder engagement.
- Built AI-driven automation workflows using Make.com, GPT integrations, and APIs to generate end-to-end video scripts, enabling scalable AI-based video creation.
- Implemented data filtration and analytics pipelines to process raw datasets, compare online popularity metrics, and extract actionable insights to improve performance and customer engagement.
- Collaborated with cross-functional teams to align the behavior of the user interface with the logic of the backend automation and business requirements.
- *Tech Stack:* HTML, CSS, JavaScript, React, Figma, REST APIs, Make.com, OpenAI GPT APIs

Intern – Data Analysis and Optimization, Central Coalfields Limited – Ranchi

April 2025 – May 2025

- Data cleaning, preprocessing, and validation were performed on operational and CSR datasets to ensure accuracy and consistency for analysis.
- EDA was performed to analyze performance metrics, identify trends, and support process optimization.
- data-driven reports from structured datasets were created to support informed management decision-making.
- *Tech Stack:* Python (Pandas, NumPy – Basics), Excel, Data Analysis, Data Cleaning, Reporting, and Documentation.

College Projects

Deployable Solar Antenna

| Certificate

- Designed a compact, lightweight deployable antenna integrated with solar panels for combined communication and power generation in CubeSat missions.
- Developed origami-inspired folding mechanisms to achieve efficient stowage and reliable in-orbit deployment.
- Engineered actuator-based deployment systems ensuring controlled, low-power antenna extension.
- Applied aerospace design and structural mechanics principles to optimize strength, weight, and system reliability.

Customer Segmentation System

- Built a web-based ML application using K-Means clustering to segment customers based on purchasing behavior and generate business insights.
- Developed end-to-end functionality with Flask backend and interactive frontend, along with data analysis and visualization.
- *Tech Stack:* Python, K-Means Clustering, Flask, HTML, CSS, JavaScript, Matplotlib, Seaborn

CO-CURRICULAR ACTIVITIES

- *NSS Volunteer:* Participated in government-sponsored social initiatives and community development programs under the National Service Scheme (NSS).
- *Konnexions Member (KIIT IT Society):* Served as event photographer, supporting official technical and cultural events and documenting society activities.

Skills

- Programming & Core Concepts: Python, Java, C, C++, JavaScript, OOPs
- Web Technologies & Databases: HTML, CSS, ReactJS, NodeJS, SQL, MySQL, DBMS
- AI & Automation: AI Prompt Engineering, OpenAI GPT APIs, Data Analysis, Make.com
- Tools: Git, Figma, Lovable, Google Workspace, Excel, Word, PowerPoint, Operating Systems
