Professional Summary

Results-driven Frontend & Full-Stack Developer with hands-on industry internship experience designing scalable web applications, AI-powered automation workflows, and data-driven dashboards. Proficient in React.js, Next.js, Node.js, Python, REST API integration, and OpenAI GPT-based systems. Experienced in building production-grade, responsive applications using component-based architecture and modern frontend frameworks. Strong background in Agile development, performance optimization, debugging, and full software development lifecycle (SDLC). Seeking a Software Engineer / Frontend Developer role to deliver high-impact user experiences and scalable software solutions.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, Python, Java, C, C++, SQL
- **Frontend:** React.js, Next.js, HTML5, CSS3, Tailwind CSS, Responsive Web Design, Cross-Browser Compatibility, UI Optimization, Web Performance Optimization
- **Backend & APIs:** Node.js, Express.js, Flask, RESTful API Design, API Integration, JWT Authentication, Microservices Architecture (Basics)
- **Databases:** MySQL, PostgreSQL, MongoDB, DBMS, Query Optimization, Data Modeling
- **AI & Automation:** OpenAI GPT APIs, LLM Integration, Prompt Engineering, AI Workflow Automation, Make.com Automation, Data Processing Pipelines
- **DevOps & Tools:** Git, GitHub, CI/CD (Basics), Docker (Basics), Vercel Deployment, Webpack, Vite, Figma, Linux Environment, Excel
- **Testing & Practices:** Unit Testing (Jest Basics), Debugging, Agile/Scrum, Code Review, Object-Oriented Programming (OOP), Data Structures & Algorithms, Software Development Lifecycle (SDLC)

Professional Experience

Logicleap AI Pvt. Ltd., Bangalore

Jul 2024 – Jan 2025

Software Engineer Intern |

- Developed 3+ production-grade responsive React.js dashboards improving stakeholder onboarding efficiency by approximately 40%.
- Engineered end-to-end AI automation pipelines using Make.com and OpenAI GPT APIs reducing manual script generation time to under 5 minutes.
- Implemented Python-based data processing pipelines handling 10,000+ records improving targeting accuracy by 25%.
- Collaborated with cross-functional teams using Agile workflows reducing development iteration cycles by 30%.
- Integrated RESTful APIs and OpenAI GPT services enabling real-time AI-generated content rendering with sub-2-second latency.
- **Tech Stack:** React.js, JavaScript (ES6+), HTML5, CSS3, REST APIs, OpenAI GPT APIs, Make.com, Python, Figma

Central Coalfields Limited (CCL), Ranchi

Apr 2025 – May 2025

Data Analysis & Optimization Intern |

- Processed and validated enterprise datasets using Python (Pandas, NumPy) achieving over 98% data accuracy.
- Conducted exploratory data analysis identifying inefficiencies that supported operational optimization.
- Delivered structured analytical reports reducing manual reporting workload by approximately 35%.
- **Tech Stack:** Python (Pandas, NumPy), Excel, Data Cleaning, Data Analysis, Visualization

Technical Projects

Customer Segmentation System

Python · Flask · React.js · K-Means

- Designed and deployed full-stack machine learning web application implementing K-Means clustering.
- Built Flask REST API integrated with React frontend enabling real-time visualization dashboards.
- Implemented automated data preprocessing and model pipelines reducing reporting effort by 60%.
- Delivered responsive cross-browser compatible UI ensuring consistent performance across devices.

Deployable Solar Antenna — CubeSat Mission

- Designed deployable antenna integrating solar panels for communication and power generation.
- Engineered folding mechanism reducing stowed volume by over 60%.
- Applied structural mechanics to optimize deployment reliability and structural strength.

Achievements

- Built production-grade dashboards deployed and used in real internship environments supporting live business workflows.
- Designed and implemented AI automation pipelines integrated into operational business processes.
- Completed multiple end-to-end full-stack deployments including frontend, backend, and database integration.

Education

Bachelor of Technology — Computer Science Engineering

Kalinga Institute of Industrial Technology (KIIT-DU), Bhubaneswar

Expected May 2026

Relevant Coursework:

Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Web Technologies, Computer Networks, Operating Systems, Software Engineering

Certifications & Activities

- Deployable Solar Antenna Design — Certificate of Completion, KIIT-DU
- NSS Volunteer — National Service Scheme
- Event Photographer — Konnexions (KIIT IT Society)
